Key Insights

Olist E-Commerce Analysis | 2016–2018

Revenue & Growth

Total revenue of R\$15.84M across 99,441 orders shows strong consistent growth from 2016 to 2018, with a notable Black Friday spike in November 2017.

Delivery Performance

93.4% of orders are delivered on time, averaging 12 days — nearly 2 weeks earlier than the 23-day estimate. However, late orders take an average of 33 days, nearly 3x longer than on-time orders.

Customer Satisfaction

Overall average review score is 4.03/5. On-time deliveries average 4.21 stars while late deliveries drop to 2.27 — late delivery nearly halves customer satisfaction.

Products

Health Beauty leads total revenue at R\$1.44M. Computers commands the highest average order value at R\$1,286 despite low order volume — a premium opportunity.

Geography

São Paulo alone generates 37% of total revenue. The top 3 states (São Paulo, Rio de Janeiro, Minas Gerais) account for 62.5% — heavy concentration in Brazil's southeast.

Customer Retention

96.7% of customers made only one purchase — repeat buying is rare and represents a significant untapped growth opportunity.

Recommendations

1. **Prioritize late shipments** — target the 6.6% of late orders proactively to protect satisfaction scores
2. **Dual category strategy** — volume marketing for Health Beauty, premium positioning for high-Average Order Value categories like Computers
3. **Invest in retention** — loyalty programs or post-purchase engagement could significantly boost revenue from existing customers
4. **Geographic expansion** — reduce dependency on southeast Brazil by growing presence in underserved regions
